

We Build Partnerships

LPA retail lighting solutions

With over 30 years experience in lighting and energy solutions, LPA is a global leader with a dedicated local focus. Our vast experience in retail lighting has led us to create a range of modern lighting solutions that improve light quality, optimise efficiency, and your return on your investment. We provide technical expertise and personalised service including end-to-end project management, design and documentation, procurement and product delivery, installation, warranty maintenance and value propositions.

From our clients through to our manufacturers, we pride ourselves in providing superior end-to-end solutions that create lasting impact, and lasting relationships.

Superior Lighting, Superior Service, Superior Results

Want more than a one size fits all approach to your business?

At LPA, we create more than just superior lighting - we create partnerships, built for lasting success. From large scale global rollouts to independent stores, we have a proven track record in retail because we always keep your customers in mind.

We understand the correlation between lighting and sales from the shop window to the fitting room. Your customers shopping experience is at the forefront of our minds from initial discussions, to lighting design and fitting choice, through to delivery and after installation support including our aiming service.

Our adaptable, world class service model allows us to provide you with high-quality products at competitive pricing in shorter lead times, while meeting the unique needs of both you and your customers.

Why Lighting Design Matters?

First impressions last

Our team of experienced and passionate Lighting Designers know first impressions count and understand the correlation between lighting and sales.

Using their vast technical expertise, our Design Team will provide cutting edge design that considers the lighting needs for retail applications such as window displays, mannequins, perimeter wall bays, POS counters, fittings rooms and BOH areas.

Different types of primary lighting will be used to control flow, highlight specific areas, make products pop, create an inviting atmosphere and leads the customer to purchase.

The end result will be a design drawing pack that meets all requirements as specified by the client and improves the overall lighting effect whilst reducing energy consumption.

Effective lighting sells an image of professionalism and more importantly showcases products on display, leading to increased sales.

5 Reasons Why to Upgrade Lighting

Lighting that pays for itself

Lighting upgrades put improved energy efficiency within easy reach of your business no matter your motivation, be it bottom line savings, environmental impact, social responsibility or a combination of all three.

When efficiency upgrade opportunities are compared to factors like payback period, internal rate of return, budget and project timeframe, lighting comes out on top in the majority of cases as the most cost effective solution providing an attractive return on investment.

The increased life of components of new lighting technologies as well as warranty periods also serve to cut maintenance costs, further adding to the total savings potential.

Our experience and range of capabilities in lighting design and solutions provide the foundation for an integrated process for planning and managing energy efficiency upgrades.

1 Increase sales revenue

2 Reduce energy costs

3 Reduce maintenance costs

4 Improve reliability

5 Short payback periods

“Noise Noise Noise likes to challenge the norm and creates retail spaces that push the boundaries. I have worked with LPA for many years, they have been pivotal in helping create and execute our design concepts into a reality. They have supported us through various projects with recommendations on lighting for each individual space and execution. Their knowledge and experience has helped make each project a success. The work that LPA has done for Noise Noise Noise is extremely valuable to help achieve the outcomes I expect to deliver.”
